The best vaccine to take is the one that is offered to you!

\*'Efficacy Rates' are the percent reduction in disease in a group of people who received a vaccine **in a clinical trial**. A vaccine having 95% efficacy does not mean that the vaccine will not work for 5% of people who take it. It means that if you get that vaccine, every time you are exposed to COVID-19, you are 95% less likely to get sick than a person who did not receive the vaccine. ALL available COVID -19 vaccines have 100% efficacy at protecting against hospitalization and death.
